# Library functions: the fall of the card catalog

- Automation spread during the 80's
- Now, it's rare to come upon a card catalog
- OPACs are the public face of the integrated library system but more lurks under the surface

# More library functions

- Integrated library systems (ILS) transformed:
- Cataloging: no longer done in-house → services like OCLC sell the MARC records
- Circulation: cards in the back of the book are no longer needed. Due dates, fines, holds, recalls are kept track of automatically
- Acquisitions; Serials; Reports & Statistics; ILLs
- Search and retrieve: OPACs → in-house/online; Z39.50 protocol

# Library as a place

- Ethernet and wireless access
- Robotic Retrieval Systems
- RFID
- Information Commons

# Content & containers

- Internet
- Index databases – cd-roms and Internet
- Full-text collections and DOIs
- Open link resolvers
- Federated searching
- Institutional Repositories
- E-books with readers, online-based and podcasts

# Outreach

- Email and websites
- Chat, instant messaging, synchronous collaboration software, roving reference
- Alerts
- Blogs and wikis
- Feeds

# More about blogs

- First librarian blogs in 1998 and 1999; now, over 500 by libraries or librarians
- Some blogs of interest:

The Shifted Librarian

OSS4Lib

RSS4Lib

Library Journal Tech Blog

ALA TechSource Blog

# The Future

- The “Bookless Library”?
- The “Ubiquitous Library”
- New roles for librarians
